

Package ‘ssmsn’

October 14, 2022

Type Package

Title Scale-Shape Mixtures of Skew-Normal Distributions

Version 0.2.0

Date 2017-01-31

Author Rocio Maehara and Luis Benites

Maintainer Luis Benites <lbenitesanchez@gmail.com>

Imports MCMCpack

Description

It provides the density and random number generator for the Scale-Shape Mixtures of Skew-Normal Distributions proposed by Jamalizadeh and Lin (2016) <[doi:10.1007/s00180-016-0691-1](https://doi.org/10.1007/s00180-016-0691-1)>.

ssmsn-package *Scale-Shape Mixtures of Skew-Normal Distributions*

Description

It provides the density and random number generator.

Details

Package: ssmsn
 Type: Package
 Version: 0.2
 Date: 2017-01-31
 License: GPL (>=2)

Author(s)

Rocio Maehara <rmaeharaa@gmail.com> and Luis Benites <lbenitesanchez@gmail.com>

References

ssmsn

Scale-Shape Mixtures of Skew-Normal Distributions

Description

It provides the density and random number generator.

Usage

```
dssmsn(x, mu= NULL,sigma2= NULL,lambda= NULL,nu= NULL,family="skew.t.t")
rssmsn(n,mu= NULL,sigma2= NULL,lambda= NULL,nu= NULL,family="skew.t.t")
```

Arguments

x	vector of observations.
n	numbers of observations.
mu	location parameter.
sigma2	scale parameter.
lambda	skewness parameter.
nu	degree freedom
family	distribution family to be used in fitting ("skew.t.t", "skew.generalized.laplace.normal", "skew.slash.normal")

Details

As discussed in Jamalizadeh and Lin (2016) the scale-shape mixture of skew-normal (SSMSN) distribution admits the following conditioning-type stochastic representation

$$Y = \mu + \sigma \tau_1^{-1/2} [Z_1 | (Z_2 < \lambda f^{-1/2} Z_1)],$$

where $f = \tau_1/\tau_2$ and (Z_1, Z_2) and (τ_1, τ_2) are independent. Alternatively the SSMSN distribution can be generated via the convolution-type stochastic representation, given by

$$Y = \mu + \sigma \left(\frac{\tau_1^{-1/2} f^{1/2}}{\sqrt{f + \lambda^2}} Z_2 + \frac{\lambda \tau_1^{-1/2}}{\sqrt{f + \lambda^2}} |Z_1| \right).$$

Value

`dssmsn` gives the density, `rssmsn` generates a random sample.

The length of the result is determined by `n` for `rssmsn`, and is the maximum of the lengths of the numerical arguments for the other functions `dssmsn`.

Examples

```
rSTT <- rssmsn(n=1000,mu=-4,sigma2=1,lambda=1,nu=c(3,4),"skew.t.t");hist(rSTT)
rSGLN <- rssmsn(n=1000,mu=-4,sigma2=1,lambda=1,nu=3,"skew.generalized.laplace.normal");hist(rSGLN)
rSSN <- rssmsn(n=1000,mu=-4,sigma2=1,lambda=1,nu=3,"skew.slash.normal");hist(rSSN)

dSTT <- dssmsn(0.5,mu=-4,sigma2=1,lambda=1,nu=c(3,4),"skew.t.t")
dSGLN <- dssmsn(0.5,mu=-4,sigma2=1,lambda=1,nu=3,"skew.generalized.laplace.normal")
dSSN <- dssmsn(0.5,mu=-4,sigma2=1,lambda=1,nu=3,"skew.slash.normal")
```
